Building E5244
Edgewood Area, Aberdeen Proving Ground
Harford County, Maryland

7. DESCRIPTION

Building E5244 is a general purpose warehouse located at the Edgewood Area of Aberdeen Proving Ground. It was constructed in 1942. The building is located in the industrial core near the site of the original World War I shell-filling plants, southwest of Fleming Road and east of Hoadley Road.

Building E5244 is typical of World War II permanent warehouse construction. The building is a long rectangular structure resting on a concrete slab foundation. Constructed of structural clay tile walls, the building terminates in a gable roof clad in asphalt shingles. The roof is pierced by four metal ventilators. The building has three overhead track doors located on the east wall and a smaller overhead track door located on the south gable end of the building. There are no windows. The building is utilitarian in its design and lacks stylistic references or ornamentation. Building E5244 exhibits numerous alterations to the exterior. All of the original loading docks, which once surrounded the building, have been removed. All the sliding doors on the west elevation have been infilled with concrete block.

8. SIGNIFICANCE

Summary

Building E5244 represents a common type of permanent storehouse that was constructed during World War II (Criterion A). However, the utilitarian storage facility functioned as a minor support building for the clothing impregnation plant complex that operated between 1941 and 1942 and possesses a minor association with World War II. The building is an example of a prevalent type of industrial warehouse (Criterion C). Building E5244 has been modified and does not retain sufficient integrity of design to serve as a representative example of the type, period, or method of construction (Criterion C). Due to subsequent alterations, it does not possess the qualities of significance for listing on the National Register of Historic Places.

History

Building E5244 was constructed as one of numerous storage facilities erected during World War II at Edgewood Arsenal, known today as Edgewood Area. Edgewood Area has been associated closely with chemical warfare activities since its establishment in 1918. From 1918 through 1945, the Chemical Warfare Service coordinated the development, testing, production, storage, and deployment of chemical weapons. During World War II, permanent construction at Edgewood Area was concentrated in the industrial core and surrounding warehouse complexes. The World War I-era industrial core was expanded through the addition of utilitarian buildings to support chemical weapons production during World War II; older buildings were remodeled to accommodate new technologies. Of the 259 extant permanent buildings related to the World War II historic context in Edgewood Area, half of them were constructed as storehouses.

By World War II, the World War I era shell-filling plants at Edgewood Arsenal had been dismantled, and the site was occupied by Building E5238, a clothing impregnating facility located southeast of Building E5244. The clothing impregnation process treated manufactured clothing with a chemical solvent. This solvent was intended to provide protection by reacting with chemical agents and by preventing hazardous amounts of liquid or vapor from reaching the skin. At the beginning of World War II, impregnated clothing was an important component of emergency preparedness since the role chemical weapons would play in the war was unknown. The treated clothing was stockpiled for future use, as required by the exigencies of war.

Section 8.2

The clothing impregnation plant in Building E5238 operated between 1941 and 1942. The plant produced approximately 3,874,918 pounds of treated clothing and was the largest of four impregnating plants that operated at Edgewood Area. Chemicals for this process were received by tanker car from an adjoining railroad spur. Associated buildings surrounded the impregnating plant and included a water-cooling tower, above-ground steel storage tanks, and numerous warehouses, including Building E5244. The warehouses were used to store chemicals used in production, pretreated clothing, and impregnated clothing prior to shipment or storage. The buildings associated with the impregnation clothing plant remain extant, but their use in the industrial process was shortlived. Building E5238 only served as an impregnation clothing plant for one year. After the plant closed in 1942, the building was converted to office space. Building E5244 later was converted to a general storage facility (U.S. Army Environmental Hygiene Agency 1989:54-58, 872).
